£3.4M in avoidable readmissions, 119 breached standards and a mortality rate that doubles when beds are full. Three actions can change this

Cost of Long Wait Visits

Avg Satisfaction

Mortality Rate

Readmission Rate **17.04%**

Estimated Preventable Deaths 5

Complaint Rate 7.37%

Some hospitals are spending more per patient than they earn. (Drill down to department)

— Priority 2/3 - Triage Audit

— Priority 3/3 - Discharge Planning

Invest in Structured Discharge Planning Across the Network. King's College Hospital NHS FT records the highest 30-day readmission rate at 18.2% against a network average of 17.0%. The financial cost of emergency readmissions across the network is £3,399,386. Structured discharge checklists, 7-day community follow-up calls, and telemedicine check-ins within 72 hours of discharge would reduce this burden without requiring new infrastructure investment.

Move the sliders to stimulate different policy thresholds and see the network-wide impact update in real time

If Bed Occupancy Threshold is set at

The network will be over capacity by

If Triage Target Minutes is set at

5K

Patients will be Breaching the Triage Target

If Wait Time Reduction Target is set at

The Network is Projected to Save

£106.18K

At 85% occupancy, this threshold was crossed 22 times across the network in the past two years, that's roughly 0.9 hospitals over capacity every month.

If the triage target is set to 15 minutes, 5,164 patients currently fall outside this threshold and would require intervention to bring the network into compliance.

Reducing wait times by 20% from their current level would save an estimated £106,175 against a current cost of long-wait visits of £530,875.
